WORK EXPERIENCE

Domain specific RAG engine & AI Agent(FastMCP & Python)

- Architected a Retrieval-Augmented Generation (RAG) system using FastMCP (Model Context Protocol) to enable low-latency semantic search and tool-calling over structured domain knowledge bases.
- Built custom retrieval and context-injection pipelines using Python, optimizing vector indexing to supply relevant context into LLM prompts.
- Designed agentic tool interfaces to handle multi-step reasoning and dynamic query execution across high-complexity dataset rule sets.

Walmart

Oct 2025 - Aug 2026

Senior Software Engineer(International Fulfilment)

- Leading cross-border fulfillment integrations to streamline global order processing across international markets
- Built proactive alerting systems for missing critical data attributes, significantly reducing downstream failures and operational escalations
- Worked on workload identity changes which automated the manual Kafka certificate rotation.

British Petroleum

Mar 2024 - Oct 2025

SDE-2(Castrol shop)

- Developed a pipeline using Palantir Foundry to process refinery instrument PDFs, generating Foundry objects and ontologies using PyTesseract OCR and OpenCV algorithms deployed on Foundry Functions.
- Led a team of 4 engineers to launch Castrol Shop for Turkey, scaling the platform to support Turkish clients monthly users with localized, GDPR-compliant backend systems.
- Optimized Kubernetes and Docker pipelines, cutting deployment times by 50% and improving release velocity for a 20-developer team.
- Enhanced APIs using a secure user identity (CIP), leveraging GraphQL for efficient data access.
- Integrated Google Analytics on React based Castrolshop UI for real-time insights, driving a 90% reduction in error pages through faster detection and fixes.
- Improved platform security and maintainability by resolving vulnerabilities and upgrading Node.js and Webpack.

Amazon, India

Sep 2021 - Mar 2024

SDE-1(Consumer Payments)

- Automated Elasticsearch/Kibana updates for payment execution data, saving 10+ engineering hours per week.
- Built a PayStation self-service onboarding platform using React and AWS (Route53, CDN), reducing onboarding effort by ~3 months.
- Automated ECS monitoring and alarms using AWS RUM, improving issue detection and service reliability.
- Reduced common development setup time from 6 weeks to 6 hours by creating reusable ECS Fargate templates.
- Built a DocHub using Docusaurus to auto-generate documentation; received 20+ internal recognitions.
- Resolved 230+ operational issues and earned "Operational Excellence Achiever" recognition.
- Mentored two interns through successful full-time conversions and contributed to university/lateral hiring by conducting 10+ core Data Structures & Algorithms (DSA) interview rounds.

Bank of America Pvt. Ltd.

Jul 2020 – Sep 2021

Software Engineer 1-B

- Supported CI/CD pipelines and coordinated frontend releases with the Core Team.
- Developed .NET APIs integrated with the [React.js](#) based Customer CX platform for client loan workflows.

EDUCATION

Institute of Technology, Nirma University, India

May 2016 – May 2020

Bachelors in Information Technology

- **Project** - Produced a Gujarati Text Dictionary by extracting content from 'Shabdakosh' and Gujarati newspaper (Divya Bhaskar), utilizing LSTM and RNN algorithms to establish a Gujarati wordnet with 10,000+ words.

SKILLS

- Core: Java, AWS, Kubernetes, Distributed Systems, System Design
- Backend & Cloud: [Node.js](#), GraphQL, REST APIs, AWS (ECS, Fargate, Route53, CloudFront)
- AI: Palantir foundry, functions, ontology, OpenCV, PyTesseract, FastMCP, Python, RAG, LLM APIs, Langchain, LangGraph.
- Observability & Tools: OpenObserve, Kibana, Elasticsearch, CI/CD Pipelines, Docker, Kubernetes
- Familiar: React, TypeScript
